                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A method has been developed for the control of European corn borer (Ostrinia nubilalis), comprising contacting the pest with a pesticidal amount of a Bacillus thuringiensis toxin. The method is used for the control of European corn borer (Ostrinia nubilalis). The method can also be used for the control of other non-mammalian pests, particularly black cutworm, and other lepidopteran pests. The present sequence encodes a Bacillus thuringiensis toxin from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Method for control of European corn borer using Bacillus thuringiensis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AGAACCTAGTTTGGGTGGAATTAATACACTATTAT-----CAATAATAGGAAAACTAAT

The sequence encodes a B. thuringiensis Lepidopteran-active delta-endotoxin, crystal protein CryBT60. The Lepidopteran-active B. thuringiensis delta-endotoxin polypeptides may be used as compositions that are applied to plant crops to protect them from insect damage. The polymuclectides may be used in the production of transgenic plants that express the insecticidal polypeptides and consequently have improved insect resistance compared to non-transformed plants. Monocotyledonous or dicotyledonous plants may be protected in this way, for example corn, wheat, soybean, octton, rice, rye, sorghum, sugarcane, tomato, tobacco, kapok, flax, potato, barley, turf grass, pasture grass, berry, tobacco, kapok, flax, potato, barley, turf grass, pasture grass, berry, to legume, vegetable, ornamental plant, shrub, cactus and/or tree cell. A wide range of insects (e.g. gypsy moth, looper, tobacco budworm, cotton leaf perforator and spruce budworm) may be affected by application of the insecticidal polypeptides (full details given in specification)
                                                                                                                                                                                                                                                       Lepidopteran-active Bacillus thuringiensis delta-endotoxin polypeptides and the polynucleotides that encode them, useful for increasing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 2407 BP; 785 A; 409 C; 495 G; 718 T; 0 U; 0 Other;

which has larval growth inhibiting or insecticidal effect in members of the Scarabaeidae insect family. The polypeptides and agents derived from the polypeptides of the invention are useful for controlling Scarabaeidae insects. Larvae of the Scarabaeidae insects eat the roots of a wide variety of plants e.g turf, agricultural or horticultural crops and trees, causing serious damage. This sequence encodes a polypeptide associated with the parasporal body contained in the sporangia of porteinaceous aggregate which comprises one kind or different kinds of polypeptides. The products of the invention have been shown to have a standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1035 ATAATCGATTTAGAAGAGAAATAACGTTAATAGTATTGGATATTGGGCATTGTTTCAA 1094

                                                                                         ADR89411 standard; cDNA; 1986 BP.
                                                                                                                                                                                                        18-NOV-2004
                                                                                                                                                ADR89411;
                                  RESULT 14
                                                               ADR89411
                                                                                                                      This invention relates to a novel isolated polynucleotide and the encoded protein which has a larvae growth inhibiting or insecticidal effect on a Scarabaedide insect. The invention may be useful for the development of compounds with an insecticide activity. The polypeptide encoded by the gainst Scarabaedide insects such as larval growth inhibitor or insecticide compounds with an insecticide activity. The polypeptide encoded by the polymucleotide is useful as a larval growth inhibitor or insecticide composed to turf (for example golf courses), agricultural crops (for example sweet potato or peanuts), or trees. Larvae of Scarabaeidae concessed such as Anomala cuprea, Blitopertha orientalis and Popillia as the larvae are buried in the ground large amounts of pssticides, but as the larvae are buried in the ground large amounts of pssticides, but as the larvae are buried in the ground large amounts of pssticides, but as the larvae are buried in the ground large amounts of pssticides, but be used and there is a need for safer control methods. A polypeptide from Pannibacillus popillae supp. melolonthae HI has a controlling effect on provides new polypeptide have controlling effects on Anomala cuprea, Blitopertha orientalis and Popillia japonica. The invention provides new polypeptides obtained by screening Psannbacillus popillae expression libraries using antisera obtained by immunizing animals with extracts of Psenibacillus popillae species from infected Scarabaeidae controllaries. The new polypeptides are unrelated to the previously identified in the library screening against Anomala cuprae alavae showed an inhibitory effect on the larvae. The present agequence is that of a gene of the popises. The parasporal body region of Psenibacillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  956 CAGATGCAGTGGGATATTCATCGGGAACTTATAGTTGGTTACGGAATTGGCCTAATACTT 1015

This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The mucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The mucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin presence of delta-endotoxin or delta-endotoxin or presence of delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated delta-endotoxin and delta-endotoxin-associated nucleic acids and polypeptides, useful for killing lepidopteran or coleopteran pests or for producing organisms with pesticide resistance.

acide sts or

```
This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, generating altered or improved delta-endotoxin or delta-endotoxin associated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or delta-endotoxin or del

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                    gtgaaaaagatgagtccata......acgatctgtttaccaattaa 2082
